

Affigent, an Akima Company, is a turnkey IT solutions provider dedicated to helping agencies modernize their IT infrastructure while simultaneously improving security and delivering mission-serving solutions faster and at a lower cost.

As a wholly owned subsidiary of Akima, an Alaska Native Corporation, Affigent offers customers the flexibility and agility of working with a small business, while also receiving support from a **\$2.4 billion global enterprise** with decades of experience working with the federal government.

Affigent is partnered with leading and emerging technology vendors to deliver best-fit solutions for our customers.

By providing secure edge-to-cloud networking solutions, Aruba allows customers to consistently capitalize on opportunities. Their products leverage AI-based machine learning to deliver simpler, faster, and more automated networks that analyze data to help agencies thrive. They take a cloud native approach to helping customers meet their connectivity, security, and financial requirements across data center and remote worker environments.

Juniper Networks is a leading provider of high-performance networking and cybersecurity solutions that enable enterprises to build secure, scalable, and automated networks. Its advanced routers, switches, software-defined networking platforms, and AI-driven management tools optimize network performance and simplify operations. With a focus on innovation and open standards, Juniper helps organizations accelerate digital transformation while ensuring reliability and security.

Dell Technologies delivers a one-stop-shop for storage, data protection and a secure pathway to cloud. Dell Technologies unites seven technology leaders – Dell, Dell EMC, Pivotal, RSA, Secureworks, Virtustream and VMware – in one company with the power to drive digital transformation and generate real results every day.

Hewlett Packard Enterprise Software offers a comprehensive enterprise software portfolio to help government agencies optimize and secure their applications, information and infrastructure. The HPE Software portfolio includes products and services such as application security, data security, security information & event management (SIEM), big data platform, information management, and more.

Oracle is a complete, open, and integrated business software and hardware systems company. With more than 370,000 customers—including 100 of the Fortune 100—in more than 145 countries around the globe, Oracle is the only vendor able to offer a complete technology stack in which every layer is engineered to work together as a single system. Oracle's industry-leading public sector solutions give organizations unmatched benefits including unbreakable security, high availability, scalability, energy efficiency, powerful performance, and low total cost of ownership.

Nutanix offers hyperconverged infrastructure and cloud software (including its AHV hypervisor, Prism management platform, and Calm automation and orchestration tool) to unify compute, storage, and virtualization for on-premises and hybrid/multi-cloud environments. It simplifies IT operations with single-pane management, built-in automation, and policy-driven orchestration for faster deployment and lifecycle management. Nutanix can help to reduce total cost of ownership, improve scalability and resilience, speed application delivery, and improve operational efficiency for your enterprise.

Red Hat provides an enterprise-grade open source stack including Red Hat Enterprise Linux (RHEL), OpenShift container platform, Ansible automation, OpenStack and Ceph for private cloud and storage, and middleware like JBoss for application development and integration. Red Hat delivers AI-ready infrastructure and platforms to run, scale, and manage ML workloads and models across hybrid and multi-cloud environments. Their capabilities combine, secure and automated deployment, MLOps tooling, and enterprise support to accelerate model development and governance.
